Problem Statement

FARMERS IN GHANA STILL MANUALLY OPERATE POULTRY COOP DOORS AND HEAT LAMPS. THIS CREATES CHALLENGES:

- LABOR INEFFICIENCY → FARMERS MUST ALWAYS BE PHYSICALLY PRESENT TO OPEN/CLOSE DOORS AND MANAGE HEAT.
- SECURITY RISKS → FORGETTING TO CLOSE THE COOP EXPOSES POULTRY TO THEFT OR PREDATORS.
- NO REMOTE MONITORING → FARMERS LACK REAL-TIME CONTROL OVER COOP CONDITIONS.

Functionality /Solution

Our project introduces a **Smart Gate System** designed to automate and simplify poultry farm management in Ghana.

- **Time-based automation:** The gate opens and closes at scheduled times, ensuring poultry get the right exposure without constant farmer supervision.
- **Weather-based control:** Integrated weather data prevents poultry from being exposed to heavy rain or , improving animal welfare.
- **Location-based adjustment:** The system adapts to the farmer's environment, making it practical for rural and urban poultry setups.
- **Remote monitoring & control:** Farmers can operate the gate from anywhere using a **dashboard**, reducing unnecessary travel.
- **Manual override:** A button allows the farmer to operate the gate manually when nearby, ensuring flexibility in all conditions.

Physical Components

- Raspberry Pi , 4
- Bread board
- Jumper wires
- Servo Motor
- LED Lights
- Cardboard Model

Tech Stack

- Python
- Flask
- GPIO
- Bootstrap
- JS
- Flask Mail

Demo Flow

LOGIN → VIEW STATUS (WEATHER, GATE, HEAT LAMP) → DASHBOARD CONTROL (REMOTE OR MANUAL: GATE & HEAT LAMP) → GATE ACTION / LAMP ACTION

- LOGIN – THE FARMER SECURELY LOGS INTO THE SYSTEM.
- VIEW STATUS – THE FARMER CHECKS:
 - CURRENT WEATHER CONDITIONS
 - GATE STATE (OPEN/CLOSED)
 - HEAT LAMP STATE (ON/OFF)
- DASHBOARD CONTROL –
 - GATE: FARMER CAN REMOTELY OPEN/CLOSE OR SET AUTOMATIC OPERATION (E.G., WEATHER/TIME CONDITIONS).
 - HEAT LAMP: FARMER CAN MANUALLY SWITCH IT ON/OFF USING THE DASHBOARD (NO AUTOMATION).
- GATE ACTION / LAMP ACTION –
 - GATE: OPENS/CLOSES AUTOMATICALLY BASED ON CONDITIONS OR FARMER'S INPUT.
 - LAMP: SWITCHES ON/OFF ONLY WHEN THE FARMER PRESSES THE CONTROL.

Future Improvements

1 Ability to create an account for the dashboard and make it easily accessible

2 Integration of automated feed system

3 Voice Assistant Control

4 Rain drop sensors

A large group of yellow chicks are huddled together in a cardboard box. A large, silver, dome-shaped heat lamp hangs on the left side of the box. In the center, there is a bright yellow bowl filled with feed. The chicks are on a bed of orange-brown wood shavings. The background is made of cardboard, with some text visible on the right side, including "PASTURE" and "ONE ABF BREAKER".
